KUSH PATEL

Business Analyst | Requirements · Process Mapping · UAT · Business Cases · Data | SQL · Power BI · Excel

Vancouver, BC | +1 (778) 637-1602 | dharma.patel552@gmail.com | linkedin.com/in/kush-patel-48885719b | github.com/KushPatel29 | kushpatel29.github.io

Open to remote and relocation across Canada · Legally eligible to work in Canada · Available immediately

SUMMARY

- Business analyst with 4+ years between the business and its data: worked with Sales, Finance and Supply Chain at a perishable-goods distributor until every KPI had one written definition with acceptance criteria, then built the reporting they signed off.
- Finds the cause rather than the symptom: traced recurring GL/P&L and inventory discrepancies to the feeds that produced them and fixed them there, cutting them an estimated ~45%.
- Writes the documents a delivery team works from, and ties them to proof: a migration backlog of 16 user stories whose Given/When/Then criteria name the test that runs them, UAT plans with exit criteria, and business cases that show each option's cost before anyone chooses.

SKILLS

Analysis & Elicitation: stakeholder interviews and workshops, requirements registers (business, functional, non-functional, change), MoSCoW prioritisation, user stories with Given/When/Then acceptance criteria, Definition of Ready and Done, requirements traceability

Process & Change: current- and future-state process maps, root-cause analysis, RACI, RAID registers, status reporting, change and adoption plans, cutover and rollback planning

Testing & Acceptance: UAT plans with roles, scenarios, defect handling and entry and exit criteria; acceptance criteria executed as automated tests

Decisions: business cases and options analysis, sensitivity and scenario models, decision memos with owners and rollback triggers, KPI definition and governance

Data & Tools: SQL (T-SQL), Power BI (DAX, RLS), Excel (Power Query, Power Pivot, what-if tables), Python (pandas), Microsoft Fabric, Tableau, Markdown and Mermaid process diagrams; Jira Cloud (backlog loaded through the REST API)

PROFESSIONAL EXPERIENCE

Two Rivers Specialty Meats

Dec 2023 – Jun 2026 · North Vancouver, BC

Data Analyst — Operations, Logistics & Enterprise Reporting

- Partnered with Sales, Finance and Supply Chain to define governed KPIs (revenue, COGS, gross margin, OTIF, inventory turns, days on hand) with documented definitions and acceptance criteria, used in monthly variance and margin reviews.
- Traced recurring GL/P&L and inventory discrepancies to their source feeds and built reconciliation controls there, cutting discrepancies an estimated ~45% and reporting errors ~30% (internal figures, directional rather than audited).
- Widened self-service Power BI across Sales, Finance and Supply Chain, with row-level security and column masking keeping pace as access grew.
- Delivered customer intelligence (inactivity signals, lost-account tracking, rep coverage) and FEFO and lot-level traceability for recall readiness.
- Owned the legacy SQL Server estate through its migration to Microsoft Fabric, validating cutover with row counts, checksums and control totals so no reporting was disrupted.
- As sole analyst, integrated ERP, Square POS, workforce and REST API feeds into one curated data mart that the whole business reported from.

Shivam Investments

Dec 2020 – Jul 2022 · Vadodara, India (hybrid)

Financial Analyst — Data & Reporting

- Gathered reporting requirements from portfolio and risk stakeholders and translated them into Power BI dashboards with auditable measure definitions.
- Replaced manual spreadsheet consolidation with Python and SQL automation, cutting manual effort an estimated ~40%, and communicated metric definitions so recurring reports were trusted.

SELECTED PROJECTS — public documents and code; organisations and data are synthetic unless labelled

Legacy-to-Fabric Migration: BA delivery pack — requirements, backlog, RACI, RAID, change plan, business case

github.com/KushPatel29/legacy-to-fabric-migration · live: kush-asset-management-decision-board.streamlit.app

From charter to cutover: charter, stakeholder map and RACI, current- and future-state process maps, a requirements register, RAID register, status report and change plan for a 140-artifact migration. A backlog of 5 epics and 16 user stories whose Given/When/Then criteria each name the automated test that runs them (30) or the manual UAT scenario that will; a build check fails if a cited test disappears or a Must requirement has no story. The backlog is loaded into a Jira Cloud Scrum project through the REST API, with stories moved to Done only when every criterion runs in CI.

Inventory Analytics · Operations Decision Studio — Python, DuckDB / SQL, Flask, Docker · synthetic data
github.com/KushPatel29/inventory-analytics-app · live: kushpatel29.github.io/inventory-analytics-app
Requirements and UAT behind a working tool: a business-analysis case with 13 requirements and 12 UAT scenarios for an inventory decision studio that, before it recommends buying more, checks whether spare stock elsewhere already covers the gap, and what each service target would cost a year. A companion process case maps replenishment and exception management, current and future state, with handoffs and controls.

Clinical Evidence Console + FHIR Warehouse — Python, HL7 FHIR R4, T-SQL, CDISC / SDTM · synthetic data
github.com/KushPatel29/clinical-data-management · live: kush-clinical-data-dashboard.streamlit.app
A UAT plan that was tested: roles, scenarios, defect handling and exit criteria for a trial-data system. 49 defects planted, 49 found, 0 missed; the reconciliation that proved it also exposed four protocol deviations the checks had let through.

Health System Decision Support — Python, Power BI, SPC, health economics · synthetic data
github.com/KushPatel29/healthcare-claims-analytics
A decision packet, not a dashboard: on an average day, patients who no longer need acute care fill 56.9 hospital beds. Transitional care is worth funding with conditions, and the packet names what is still missing before it can start.

B.C. Local-Government Finance — Excel, dbt / DuckDB, Python · real public data
github.com/KushPatel29/bc-local-government-finance
Options with their cost, before anyone chooses: a five-year plan for any of 161 B.C. municipalities that shows a council what closing its infrastructure renewal gap costs in tax for each mix of borrowing and pace. For Fernie, closing the gap by 2029 needs 3.7% a year.

EDUCATION

Northeastern University — Master of Professional Studies in Analytics (Applied Machine Intelligence), GPA 3.76/4.0 · Vancouver, BC — **Sep 2022 – Jun 2024**

Gujarat Technological University — Bachelor of Engineering, Computer Science · India — **Aug 2017 – Aug 2021**

CERTIFICATIONS

Google Data Analytics Professional Certificate · UC Davis SQL for Data Science · Power BI Data Modelling with DAX · IBM Python for Data Science, AI & Development · Databricks Lakehouse Fundamentals.
