Open to remote and relocation across Canada · Legally eligible to work in Canada · Available immediately

SUMMARY

- Financial analyst with 4+ years in finance and finance-facing analytics: month-end GL/P&L reconciliations and Power BI reporting for portfolio and risk stakeholders at an investment firm, then margin, working-capital and close controls as sole analyst at a perishable-goods distributor.
- Makes the numbers tie out and finds out why when they don't: reconciliation controls at the source cut recurring GL/P&L and inventory discrepancies an estimated ~45%, and Python and SQL automation replaced manual consolidation, cutting effort an estimated ~40%.
- Builds formula-driven Excel models that another analyst can audit: a utility's $100.9M miss against plan split into weather, price and usage on public filings, with Excel and Power BI agreeing to the cent.

SKILLS

FP&A & Modelling: annual budget cycle (top-down targets, bottom-up submissions, challenge round, monthly phasing), three-statement models with a revolver, 3+9 reforecasts, budget versus actual and variance bridges, price-volume-mix, driver-based forecasts with backtests, scenarios, five-year operating and capital plans

Close & Controls: GL/P&L and subledger reconciliation, journal-entry testing, segregation of duties, control totals, exception logs, close certification with named reviewers

Working Capital & Margin: AP and AR aging, DSO and DPO, invoice-match exceptions, credit exposure, COGS and gross margin, pocket-price waterfalls, inventory valuation

Excel: Power Query, Power Pivot / DAX, dynamic arrays, LAMBDA, data tables, LINEST, formula-driven models that tie out to a reporting layer

Reporting & Data: Power BI (DAX, RLS), Tableau, SQL (T-SQL), Python (pandas), Microsoft Fabric, SSRS paginated reports

PROFESSIONAL EXPERIENCE

Two Rivers Specialty Meats

Dec 2023 – Jun 2026 · North Vancouver, BC

Data Analyst — Operations, Logistics & Enterprise Reporting

- Built reconciliation controls comparing source against curated totals for GL/P&L and inventory valuation, cutting discrepancies an estimated ~45% and reporting errors ~30% by resolving issues at the feed rather than patching reports (internal figures, directional rather than audited).
- Defined governed revenue, COGS and gross-margin KPIs with Finance and Sales for monthly variance and margin reviews, with documented definitions and acceptance criteria.
- Delivered AP and AR aging, DPO/DSO, invoice-match exceptions and credit-exposure reporting: a working view of cash rather than a month-old snapshot.
- Owned Power BI finance and operations reporting end to end, from the semantic model and DAX measure library to drill-through reports secured with RLS and column masking.
- Delivered FEFO and lot-level traceability and SKU-level demand forecasting deployed as Python web apps that supported procurement and reduced perishable waste.
- As sole analyst, integrated ERP, Square POS, workforce and REST API feeds into one curated data mart in Microsoft Fabric and Azure Data Factory.

Shivam Investments

Dec 2020 – Jul 2022 · Vadodara, India (hybrid)

Financial Analyst — Data & Reporting

- Performed monthly GL/P&L reconciliations across sources and investigated discrepancies to keep financial reporting accurate and traceable.
- Gathered reporting requirements from portfolio and risk stakeholders and delivered Power BI dashboards with drill-through views and auditable measure definitions.
- Automated recurring analysis with Python (pandas) and SQL views feeding Power BI, replacing manual spreadsheet consolidation and cutting manual effort an estimated ~40%.

SELECTED PROJECTS — public models and code; synthetic data is labelled

Finance Decision Models in Excel and Power BI — Excel, Power Query, Power Pivot / DAX, Power BI · real public data
github.com/KushPatel29/excel-fpa-model · workbook: PGE_Utility_FPA_Model.xlsx
Variance on public filings: Portland General Electric's $100.9M miss against plan, split into weather, price and usage from EIA, FERC and NOAA data with an exact variance bridge and a four-year load-forecast backtest, published in Excel and a seven-page Power BI report that agree to the cent. Beside it, a distributor model for price-volume-mix and working capital, and that distributor's FY2027 budget cycle: bottom-up EBITDA lands $926K short of target, a challenge round closes $335K, the rest needs 1.28% more price; three linked monthly statements balance every month; a 3+9 reforecast bridges a $671K miss.

GL / P&L Reconciliation — T-SQL, SQLite, Power BI, Tableau · synthetic data
github.com/KushPatel29/gl-reconciliation-dashboard
A close that will not fake its sign-offs: a close-certification engine tests all 5,400 journal entries and enforces segregation of duties. At month-end 8 of 60 account-periods certify, 9 go to a named reviewer and 43 are blocked; no approval is invented to make the close look finished.

Pricing & Costing Analytics — Python, DuckDB, Power BI, Streamlit · synthetic data
github.com/KushPatel29/pricing-costing-analytics · live: cost-to-price-calculator.streamlit.app
Margin leakage, priced: a pocket-price waterfall shows 18.2% of list price never arriving, ranks which points to recover, and routes each price change to the person who must approve it.

B.C. Local-Government Finance — Excel, Power Query, dbt / DuckDB, Python · real public data
github.com/KushPatel29/bc-local-government-finance
Public-sector budgeting: a five-year plan for any of 161 B.C. municipalities covering tax increases, borrowing under the legal limit and reserves; for Fernie, closing the infrastructure renewal gap by 2029 needs 3.7% a year. Across the province, the 68 municipalities investing below renewal need are $570M a year short.

GrowthOps OS — Excel, Power BI (DAX), SQL, dbt · synthetic data
github.com/KushPatel29/GrowthOps-OS · live: growthops-os.streamlit.app
Revenue reconciliation: ad platforms claimed $3.72M; the business collected $3.06M. Two bridges explain every dollar between them, and a formula-driven Excel workbook and a Power BI report reach the same answer independently.

EDUCATION

Northeastern University — Master of Professional Studies in Analytics (Applied Machine Intelligence), GPA 3.76/4.0 · Vancouver, BC — **Sep 2022 – Jun 2024**

Gujarat Technological University — Bachelor of Engineering, Computer Science · India — **Aug 2017 – Aug 2021**

CERTIFICATIONS

Power BI Data Modelling with DAX · Google Data Analytics Professional Certificate · UC Davis SQL for Data Science · IBM Python for Data Science, AI & Development · Databricks Lakehouse Fundamentals.
