

KUSH PATEL

Business Analyst | BI & Analytics Engineer | Process Improvement · Power BI · SQL · Microsoft Fabric · GIS Data

Target role: Business Analyst I — Asset Management, City of Fernie

Vancouver, BC | +1 (778) 637-1602 | dharma.patel552@gmail.com | linkedin.com/in/kush-patel-48885719b | github.com/KushPatel29 | kushpatel29.github.io

Open to relocation to Fernie and work across Canada · Legally eligible to work in Canada · Available immediately

SUMMARY

- Business analyst and BI / analytics engineer with 4+ years translating operational needs into requirements, process improvements, governed information and decision-ready reporting. Sole analyst across a perishable-goods supply chain, working with Sales, Finance, Supply Chain and vendors from stakeholder questions through acceptance, reconciliation and adoption.
- Builds dimensional models on cloud warehouses (Microsoft Fabric, Azure Synapse, SQL Server) with Bronze/Silver/Gold medallion layers, conformed dimensions and SCD Type 1/2, orchestrated in Azure Data Factory and Fabric pipelines (Airflow in project work, not production).
- Delivers Power BI end to end — semantic model, DAX measure library, RLS/OLS, publish-ready reports — so Finance, Sales and Supply Chain self-serve from one definition instead of competing extracts.
- Treats requirements, acceptance and data quality as one traceable delivery chain. Fourteen featured public projects carry **11,217 automated tests** in CI with reproducible business cases, process maps, project plans, RAID/status controls, UAT, change/adoption and asset-management evidence.

TECHNICAL SKILLS

Business Analysis & Delivery: stakeholder engagement, requirements gathering, workshop planning, current/future-state mapping, workflow analysis, business cases, charters, project plans/schedules, RACI/RAID/status reporting, dependencies, requirements traceability, UAT, change and adoption planning

Public-sector Transferability: executive/Council-style briefings, option and vendor evaluation, procurement scoring, policy/procedure impact registers, implementation roadmaps and decision gates (portfolio scenario, not municipal employment)

Asset Management: governed asset/GIS registers, lifecycle, condition, criticality, inspections, renewal need, multi-year capital options, affordability, sensitivity, funding, risk/benefit controls and delivery gates (portfolio evidence)

Microsoft 365: Word, Excel, PowerPoint and Teams; SharePoint information architecture, controlled libraries, permissions/versioning and Power Automate workflow design (portfolio blueprint, not production administration)

Warehousing & Lakehouse: Microsoft Fabric (Lakehouse, Warehouse, OneLake, Direct Lake), Azure Synapse Analytics, SQL Server, PostgreSQL, DuckDB, Delta Lake, Snowflake (dual-target dbt profile)

ELT / Orchestration: Azure Data Factory, Fabric Data Pipelines & Dataflows Gen2, dbt Core, Apache Airflow, SSIS, SQL Server Agent, incremental and CDC-style loads, schema-drift contracts, quarantine-and-replay

BI, Semantic & Spatial: Power BI (DAX, Power Query, TMDL/PBIR, RLS/OLS), SSRS, Tableau, Streamlit, Plotly; GIS data validation, governed asset joins, OGC:CRS84 / WGS 84, GeoJSON and QGIS/ArcGIS interoperability (portfolio projects)

Languages: SQL (T-SQL, window functions, CTEs), Python (pandas, NumPy, scikit-learn, Flask, FastAPI), PySpark, DAX, M

Modelling & Governance: Kimball star schemas, conformed dimensions, SCD Type 1/2, metric catalogues with owner and grain, data lineage, RLS/RBAC and column masking, de-identification (Safe Harbor, k-anonymity), versioned evaluation/release gates, cutover runbooks

Quality & Delivery: pytest, dbt tests, pandera contracts, referential-integrity and control-total checks, anomaly thresholds, reconciliation gates, Git, GitHub Actions, Docker

PROFESSIONAL EXPERIENCE

Two Rivers Specialty Meats

Dec 2023 – Jun 2026 · North Vancouver, BC

Data Analyst — Operations, Logistics & Enterprise Reporting

- Sole analyst for a perishable-goods distributor: integrated ERP, Square POS, workforce and REST API feeds into curated Bronze/Silver/Gold datasets serving ad hoc analysis, BI dashboards and operational reporting.
- Designed and built the enterprise data mart applying star schemas, conformed dimensions and slowly changing dimensions, producing reliable data products sliced by SKU, supplier, region, customer and channel.
- Owned Power BI end to end — semantic model design, a standardised DAX measure library, drill-through and publish-ready reports — giving Sales, Finance and Supply Chain self-service access without analyst dependency.
- Engineered cloud-native ELT in Microsoft Fabric and Azure Data Factory/Synapse using SQL and PySpark, with incremental loads, parameterised transforms and structured error handling.
- Built reconciliation controls comparing source against curated totals for GL/P&L and inventory valuation, cutting discrepancies an estimated ~45% and reporting errors ~30% by resolving issues at the feed level rather than patching reports (internal figures, directional rather than audited).

- Maintained data quality across the mart: automated schema, completeness, uniqueness and referential-integrity tests, anomaly thresholds, exception logging and pipeline alerting.
- Implemented FEFO and lot-level traceability for recall readiness, delivered customer intelligence reporting (inactivity signals, lost-account tracking, rep coverage), and built SKU-level demand forecasting deployed as Python web apps that reduced stock-outs and perishable waste.
- Owned the legacy SQL Server estate through migration: maintained SSIS packages and SSRS paginated reports while refactoring priority pipelines to Fabric notebooks, validating cutover with row counts, checksums and control totals so no reporting was disrupted.
- Partnered with Sales, Finance and Supply Chain to define governed KPIs (revenue, COGS, gross margin, OTIF, inventory turns, days on hand) with documented definitions and acceptance criteria, and secured them with RLS/RBAC and column masking as self-serve access widened.

Shivam Investments

Dec 2020 – Jul 2022 · India / Remote

Financial Analyst — Data & Reporting

- Gathered reporting requirements from portfolio and risk stakeholders and delivered Power BI dashboards with drill-through and auditable measure definitions.
- Automated recurring analysis with Python (pandas) and SQL views feeding Power BI, replacing manual spreadsheet consolidation and cutting manual effort an estimated ~40%.
- Performed GL/P&L reconciliations across sources and investigated discrepancies to maintain finance-grade accuracy.

SELECTED BUSINESS ANALYSIS, ASSET MANAGEMENT & ANALYTICS PROJECTS — live demos, public evidence and CI-tested delivery

Asset Management & Legacy-to-Fabric Transformation — Fabric, BA delivery, GIS / GeoJSON · 431 tests

github.com/KushPatel29/legacy-to-fabric-migration · live: kush-asset-management-decision-board.streamlit.app

Asset / GIS case: A 96-record synthetic portfolio connects lifecycle, condition, criticality and inspections to six service-level records, four lifecycle strategies per service, three investment postures and a constrained ten-year plan. Fifty-five candidate decisions preserve evidence, approvers and gates; an eight-record register is reconciled to nine WGS 84 features with blocked exceptions. The pack traces requirements to RACI/RAID/status, UAT, adoption, procurement and benefits controls.

Inventory Analytics — Operations Decision Studio — Python, Flask, Plotly, DuckDB, SQL, Docker · 316 tests

github.com/KushPatel29/inventory-analytics-app · live: inventory-analytics-app.onrender.com

Operations decision studio: Six workspaces cover a deterministic 420-SKU, seven-node network. Seven forecast methods compete in rolling-origin backtests and reconcile to ABC-XYZ assurance cells. A governed Policy Lab applies bounded demand, lead-time and service shocks, reprices network buffers/orders/exposure and compares seven service targets on an annual cost frontier; transfers are screened before another buy. The BA case traces 13 requirements, 12 UAT scenarios, pilot/adoption and Power BI-ready SQL marts; 316 tests protect the evidence.

Public-Sector Decision & Procurement Brief — options, vendor evaluation, policy and delivery controls

GitHub brief · live companion: kush-asset-management-decision-board.streamlit.app

Public-sector decision pack: Executive/Council-style problem framing, current/future-state options, weighted vendor scorecard, controlled demonstration script, policy/procedure impact register, decision rights, implementation gates, measurable guardrails and recommendation boundaries. The live companion board makes the capital, risk and delivery assumptions challengeable; the brief is clearly a portfolio scenario, not a claimed municipal procurement.

Microsoft 365 Workplace Delivery Blueprint — Teams, SharePoint, Power Automate, information management

GitHub blueprint · live companion: kush-asset-management-decision-board.streamlit.app

Modern workplace delivery blueprint: Implementation-ready design for Teams collaboration, SharePoint system-of-record libraries, information lifecycle, permissions/versioning, Power Automate approvals and alerts, acceptance testing, training, communications, rollout and hypercare. It adds the records, ownership, RACI and support controls a project team needs; it is explicitly labelled as a portfolio blueprint rather than production tenant administration.

Supply Chain Control Tower — Microsoft Fabric, Power BI, Streamlit, GIS / GeoJSON · 826 tests

github.com/KushPatel29/supply-chain-control-tower · live: kush-network-risk-decision-room.streamlit.app

Power BI + GIS control tower: Pairs a tested Power BI semantic/report layer with a Streamlit Decision Assurance Studio, metric dictionary and RLS/OLS controls. Country and node scenarios flow through an eight-stage incident clock, five governed playbooks, owner-routed actions, a controlled decision journal, replayable UAT and a nine-file evidence pack. The spatial layer governs 23 WGS 84 points and 15 QGIS/ArcGIS-ready screening routes; synthetic coordinates and straight-line distance are labelled.

Retail Analytics Platform — data products, metric governance, Python, Flask, DuckDB · 1,423 tests

github.com/KushPatel29/wholesale-analytics-platform · live: kushpatel29.github.io/wholesale-analytics-platform

Data-product control room: Nine dbt-backed products have accountable owners, stewards, decisions, grains, consumers, 27 quality gates, freshness SLAs and recovery targets. Runtime manifest evidence drives a fail-closed GO/REVIEW/NO-GO release verdict; all 62 governed metrics map to a product with formula, lineage and basis. Demonstrates operating-model design, information governance and decision-ready QA through 1,423 automated tests.

EDUCATION

Northeastern University — Master of Professional Studies in Analytics (Applied Machine Intelligence), GPA 3.76/4.0 · Sep 2022 – Mar 2024
Vancouver, BC

Gujarat Technological University — Bachelor of Engineering, Computer Science · India Aug 2017 – Aug 2021

CERTIFICATIONS

Microsoft Certified: Fabric Analytics Engineer Associate (DP-600) — in progress · Google Data Analytics Professional Certificate · UC Davis SQL for Data Science · IBM Python for Data Science, AI & Development · Databricks Lakehouse Fundamentals · Power BI Data Modelling with DAX
