KUSH PATEL

AML / Financial Crime Analyst | Transaction Monitoring · KYC / CDD · Investigations · FINTRAC Reporting | SQL · Python · Power BI

Vancouver, BC | +1 (778) 637-1602 | dharma.patel552@gmail.com | linkedin.com/in/kush-patel-48885719b | github.com/KushPatel29 | kushpatel29.github.io

Open to remote and relocation across Canada · Legally eligible to work in Canada · Available immediately

SUMMARY

- Finance and controls analyst transitioning toward AML analytics, with 4+ years of paid reconciliation, risk reporting, data-quality and access-control work across financial reporting and distribution operations.
- Built synthetic transaction monitoring, investigator briefs and KYC/CDD workflows, plus measured screening against a real public sanctions list. Alerts prioritise review; the demonstration records no completed dispositions or regulatory filings.

SKILLS

AML project methods: KYC/CDD, risk rating, EDD/PEP triggers, direct/indirect beneficial ownership, sanctions matching, rule tuning, alert triage and analytic briefs; FINTRAC/PCMLTFA mapping in educational artifacts.

Detection: SQL velocity/window rules, anomaly detection, precision/recall, threshold and alert-volume trade-offs; Python/pandas/scikit-learn and SQLite.

Controls: Reconciliation, control totals, exception logs, evidence integrity, RLS/RBAC and masking; journal/segregation checks and privacy inventory in projects.

Tools: SQL/T-SQL, Power BI, Excel, Python, Streamlit and Git; synthetic Kafka streaming and recovery exercised in CI.

PROFESSIONAL EXPERIENCE

Two Rivers Specialty Meats

Dec 2023 – Jun 2026 · North Vancouver, BC

Data Analyst — Operations, Logistics & Enterprise Reporting

- Built source-to-mart GL/P&L and inventory controls, cutting discrepancies an estimated ~45% and reporting errors ~30% (internal directional estimates, not audited).
- Automated schema, completeness, uniqueness and referential-integrity checks, with anomaly thresholds, exception logs and pipeline alerts.
- Delivered AP/AR aging, invoice-match exceptions and credit-exposure reporting for Finance.
- Secured self-service reporting with RLS/RBAC and column masking; implemented FEFO and lot traceability for recall readiness.
- As sole analyst, integrated ERP, Square POS, workforce and REST feeds into Bronze/Silver/Gold datasets using Microsoft Fabric, Azure Data Factory/Synapse, SQL and PySpark.

Shivam Investments

Dec 2020 – Jul 2022 · Vadodara, India (hybrid)

Financial Analyst — Data & Reporting

- Gathered requirements from portfolio and risk stakeholders; delivered Power BI dashboards with auditable measure definitions and reconciled GL/P&L figures across sources.
- Automated recurring preparation with Python and SQL views, replacing spreadsheet consolidation and cutting manual effort an estimated ~40% (internal directional estimate).

SELECTED PROJECTS — public code; all entities and transactions are synthetic

Transaction Monitoring — SQL, Python, scikit-learn, SQLite, Streamlit · synthetic data

github.com/KushPatel29/aml-transaction-monitoring · live: aml-transaction-monitoring.streamlit.app

Explainable monitoring: Five rules plus an anomaly model find all 60 planted cases in 100,299 synthetic transactions, versus 38 for a flat $10,000 rule. Alerted entities fall from 555 to 366. Controlled investigation records distinguish evidence from suspicion; no dispositions or filings are claimed.

FINTRAC mapping and an analytic brief — PCMLTFA, LCTR, EFTR, STR · synthetic case

regulatory mapping · analytic brief INV-ENT-01216

Reviewable reasoning: Mapped rules to reporting/indicator categories and documented a synthetic structuring case: $53,374.51 over 4.9 days, about nine times usual weekly cash. The brief states confidence, lawful alternatives and facts needed before a reporting decision.

Sanctions screening on Canada's real list — Python, rapidfuzz · real public list, synthetic customers

github.com/KushPatel29/aml-transaction-monitoring

Held-out screening: Set the fuzzy-match threshold on one half of Canada's public sanctions list, then tested the other. October 2026 results: 97.2% of generated name variants detected at 10 alerts per 10,000 synthetic customers. The list is downloaded at runtime, not committed.

KYC: customer risk rating and beneficial ownership — Python, pandas · synthetic customers

github.com/KushPatel29/aml-transaction-monitoring

Risk and ownership: Rated 1,500 synthetic customers at onboarding and annual refresh, with PEP/EDD controls and reasons. Traced 450 businesses through ownership chains to the 25% line, flagging loops and opaque structures. A risk rating governs scrutiny, not suspicion.

A PIPEDA-structured project assessment classifies 105 columns across 14 files, tests masked outputs and identifies organizational controls required before real-client use. GL close and streaming-recovery evidence: kushpatel29.github.io.

EDUCATION

Northeastern University — Master of Professional Studies in Analytics (Applied Machine Intelligence), GPA 3.76/4.0 · Vancouver, BC — **Sep 2022 – Jun 2024**

Gujarat Technological University — Bachelor of Engineering, Computer Science · India — **Aug 2017 – Aug 2021**

CERTIFICATIONS

Google Data Analytics Professional Certificate · UC Davis SQL for Data Science · IBM Python for Data Science, AI & Development · Power BI Data Modelling with DAX · Databricks Lakehouse Fundamentals.
