Open to remote and relocation across Canada · Legally eligible to work in Canada · Available immediately

SUMMARY

- Data analyst and BI / analytics engineer with 4+ years turning raw operational and financial data (ERP, POS, WMS, workforce and REST feeds) into governed warehouse layers, Power BI reporting and decisions that Sales, Finance and Supply Chain can defend. Sole analyst across a perishable-goods supply chain; before that, a financial analyst running month-end GL/P&L reconciliations.
- Builds dimensional models on cloud warehouses (Microsoft Fabric, Azure Synapse, SQL Server) with Bronze/Silver/Gold medallion layers, conformed dimensions and SCD Type 1/2, orchestrated in Azure Data Factory and Fabric pipelines (dbt and Airflow in project work, not production).
- Delivers Power BI end to end — semantic model, DAX measure library, RLS, publish-ready reports — and treats data quality as a control: automated reconciliation cut recurring discrepancies an estimated ~45% by fixing issues at the feed rather than in the report.
- Three public case studies below: Power BI and Excel reporting that ties out to the cent, a contract-tested PySpark and Delta Lake pipeline, and a dbt model over 90 official B.C. filings. Eighteen more projects, fifteen with live demos, at kushpatel29.github.io.

TECHNICAL SKILLS

BI & Data Visualization: Power BI (DAX, Power Query/M, semantic models, row-level security (RLS/OLS), incremental refresh, TMDL/PBIR), SSRS paginated reports, Tableau, Excel (Power Pivot, dynamic arrays, LAMBDA, what-if data tables), Streamlit, Plotly

Languages: SQL (T-SQL, window functions, CTEs), Python (pandas, NumPy, scikit-learn, Flask, FastAPI), PySpark, DAX, M

Warehousing & Lakehouse: Microsoft Fabric (Lakehouse, Warehouse, OneLake, Direct Lake), Azure Synapse Analytics, SQL Server, PostgreSQL, Databricks (SQL warehouse, serverless jobs, Unity Catalog), DuckDB, Delta Lake, Snowflake (dbt profile, not yet run)

ETL / ELT & Orchestration: Azure Data Factory, Fabric Data Pipelines & Dataflows Gen2, dbt Core, Apache Airflow, SSIS, SQL Server Agent, REST API integration, incremental and CDC-style loads, schema-drift contracts, quarantine-and-replay

Modelling & Governance: Kimball star schemas, conformed dimensions, SCD Type 1/2, metric catalogues with owner and grain, data lineage, RLS/RBAC and column masking, de-identification (k-anonymity), reconciliation and control totals, cutover validation

Analytics & ML: forecasting with rolling-origin backtests, classification (XGBoost, logistic regression), anomaly detection, survival analysis, recommender systems, randomized experiments and causal uplift, mixed-integer optimization (HiGHS, Gurobi), geo holdouts and difference-in-differences, LLM text-to-SQL; always graded against a simple baseline

Business Analysis: stakeholder engagement, requirements and acceptance criteria, current/future-state mapping, requirements traceability, UAT, business cases and options analysis, RACI/RAID, change and adoption planning

Quality & Delivery: pytest, dbt tests, pandera contracts, referential-integrity checks, anomaly thresholds, Git, GitHub Actions, Docker

PROFESSIONAL EXPERIENCE

Two Rivers Specialty Meats

Dec 2023 – Jun 2026 · North Vancouver, BC

Data Analyst — Operations, Logistics & Enterprise Reporting

- Sole analyst for a perishable-goods distributor: integrated ERP, Square POS, workforce and REST API feeds into curated Bronze/Silver/Gold datasets serving ad hoc analysis, BI dashboards and operational reporting.
- Designed and built the enterprise data mart applying star schemas, conformed dimensions and slowly changing dimensions, producing reliable data products sliced by SKU, supplier, region, customer and channel.
- Owned Power BI end to end — semantic model design, a standardised DAX measure library, drill-through and publish-ready reports — giving Sales, Finance and Supply Chain self-service access without analyst dependency.
- Engineered cloud-native ELT in Microsoft Fabric and Azure Data Factory/Synapse using SQL and PySpark, with incremental loads, parameterised transforms and structured error handling.
- Built reconciliation controls comparing source against curated totals for GL/P&L and inventory valuation, cutting discrepancies an estimated ~45% and reporting errors ~30% by resolving issues at the feed level rather than patching reports (internal figures, directional rather than audited).
- Maintained data quality across the mart: automated schema, completeness, uniqueness and referential-integrity tests, anomaly thresholds, exception logging and pipeline alerting.
- Implemented FEFO and lot-level traceability for recall readiness, delivered customer intelligence reporting (inactivity signals, lost-account tracking, rep coverage), and built SKU-level demand forecasting deployed as Python web apps that reduced stock-outs and perishable waste.
- Owned the legacy SQL Server estate through migration: maintained SSIS packages and SSRS paginated reports while refactoring priority pipelines to Fabric notebooks, validating cutover with row counts, checksums and control totals so no reporting was disrupted.
- Partnered with Sales, Finance and Supply Chain to define governed KPIs (revenue, COGS, gross margin, OTIF, inventory turns, days on hand) with documented definitions and acceptance criteria, secured with RLS/RBAC and column masking as self-serve access widened.

Shivam Investments

Dec 2020 – Jul 2022 · India / Remote

Financial Analyst — Data & Reporting

- Gathered reporting requirements from portfolio and risk stakeholders and delivered Power BI dashboards with drill-through and auditable measure definitions.

- Automated recurring analysis with Python (pandas) and SQL views feeding Power BI, replacing manual spreadsheet consolidation and cutting manual effort an estimated ~40%.
- Performed GL/P&L reconciliations across sources and investigated discrepancies to maintain finance-grade accuracy.

SELECTED PROJECTS — public code, documents you can download and CI-tested results

GrowthOps OS — Power BI (DAX), Excel, SQL, dbt, Python
github.com/KushPatel29/GrowthOps-OS · live: growthops-os.streamlit.app
Revenue reconciliation and BI: Ad platforms claimed $3.72M in revenue; the business collected $3.06M, and two bridges explain every dollar between them. A seven-page Power BI report with 215 documented DAX measures and a formula-driven Excel workbook reach the same findings independently and agree to the cent: Meta's 7.3× return on ad spend is 3.3× on collected cash, and a nine-point drop in lead quality traces to one new campaign.

Supply Chain Control Tower — PySpark, Delta Lake, Databricks, Power BI, SQL
github.com/KushPatel29/supply-chain-control-tower · live: kush-network-risk-decision-room.streamlit.app
Data engineering and operations analytics: A Bronze/Silver/Gold pipeline defended in three layers (schema contracts before Bronze, row quarantine with replay, a quality gate on Gold), each proven in CI by injecting the failure it exists to catch, benchmarked at 10M rows and run as a Databricks job with all 36 Gold totals matching the local build to the cent. The eight-page Power BI control tower shows short-shipping, not lateness, is the bigger OTIF failure, and that 12% of the replenishment gap needs no purchase order.

B.C. Local-Government Finance — SQL, dbt / DuckDB, Python, Excel, Power Query · real public data
github.com/KushPatel29/bc-local-government-finance
Analytics engineering on official filings: 90 provincial files held to written contracts, a dbt model with 31 data tests, and an Excel planning model for any of 161 municipalities. Found that the 68 municipalities investing below renewal need are $570M a year short, and caught the Province's own data defects, including a population file where 77 of 161 rows belong to other places.

Finance Decision Models in Excel and Power BI — Excel, Power Query, Power Pivot / DAX, Power BI · real public data
github.com/KushPatel29/excel-fpa-model
FP&A on public filings: Portland General Electric's $100.9M miss against plan, split into weather, price and usage from EIA, FERC and NOAA data, published in Excel and a seven-page Power BI report that agree to the cent, with a backtested load forecast; and a distributor model for channel economics and working capital.

More work at kushpatel29.github.io: retail analytics and metric governance, text-to-SQL, AML transaction monitoring, a live wildfire forecast on national fire data, GL close controls, pricing, inventory and dbt on Databricks.

EDUCATION

Northeastern University — Master of Professional Studies in Analytics (Applied Machine Intelligence), GPA 3.76/4.0 · Vancouver, BC — **Sep 2022 – Jun 2024**

Gujarat Technological University — Bachelor of Engineering, Computer Science · India — **Aug 2017 – Aug 2021**

AWARDS & CERTIFICATIONS

First prize, 2024 wildfire-prediction hackathon (now a live forecast) · Google Data Analytics Professional Certificate · UC Davis SQL for Data Science · IBM Python for Data Science, AI & Development · Databricks Lakehouse Fundamentals · Power BI Data Modelling with DAX. Preparing for the Microsoft DP-600 (Fabric Analytics Engineer) exam.
